### Processes

#### 1. Strategies
- **1.1 Oral Health**
- **1.2 Prenatal Outreach**
- **1.3 Developmental and Sensory Screening**
- **1.4 Injury Prevention**
- **1.5 Comprehensive Preventative Health Programs**
- **1.6 Nutrition, Physical Activity and Obesity Prevention**

#### 2. Activities
- **2.1 Screening by dental hygienists or other qualified health professionals; fluoride varnish application; distribution of oral health information to parents; referrals to dentists.**
- **2.2 Provides outreach and education to pregnant women and their families; links pregnant women to sources of prenatal care.**
- **2.3 Provides screening for developmental and sensory delays.**
- **2.4 Provides parents and child care staff education on the importance of health and injury prevention.**
- **2.5 Builds a coalition of health education programs to establish a comprehensive health education system and provide community-based health trainings to young children and their families.**
- **2.6 Provides health education focused on obesity prevention to children, families and early care and education professionals.**

#### 3. Key Outputs
- **3.1 Number of children receiving oral health screen and fluoride varnishes applied; number of participating adults and early care providers receiving training on oral health.**
- **3.2 Number of clients (pregnant/postnatal women) receiving home visitation and community based education.**
- **3.3 Number of children screened for developmental delays, vision, and hearing screenings.**
- **3.4 Number of adults and early care providers receiving training on health and injury prevention.**
- **3.5 Number of children and families receiving health promotion education.**
- **3.6 Number of children and families receiving training focused on healthy eating, activity, and obesity prevention.**

### Outcomes

#### 4. Short-term Outcomes
- **4.1 Increased numbers of children receiving oral health screening; increased knowledge about dental care.**
- **4.2 Increased use of prenatal care and needed supports for healthy pregnancy and births.**
- **4.3 Increased rates of appropriate screening and referrals for children.**
- **4.4 Families and early care providers have information and supports on child health and injury prevention.**
- **4.5 Increased access to information and preventative practices to a wider population base.**
- **4.6 Families and early care providers have information and supports on healthy eating, activity, and obesity prevention.**

#### 5. Intermediate-term Outcomes
- **5.1 Increased numbers of children engaged in regular oral health care and receiving timely oral health care from a dental care home.**
- **5.2 Improved birth outcomes.**
- **5.3 Increased rates of appropriate screening and referrals for children.**
- **5.4 Increased safe practices related to injuries and health care prevention.**
- **5.5 Increased knowledge related to the need for prevention services at parent and community level.**
- **5.6 Improved exercise, eating, and wellness activities for young children and families.**

#### 6. Long-term Outcomes
- **6.1 Increased availability and usage of dental homes; decreased dental caries in young children.**
- **6.2 Improved health for all children.**
- **6.3 Children with developmental and adaptive delays are identified earlier and receive appropriate support and care; reduced duplication of services.**
- **6.4 Decreased number of children who are injured—intentionally or unintentionally.**
- **6.5 Improved health for all children.**
- **6.6 Decrease in childhood obesity, diabetes and other related health issues.**

---

**Assumptions:** Early, consistent preventive care reduces long term health problems and maximizes health of children.

**Context:** There are existing health prevention activities occurring within the state, some require specific emphasis to meet the gaps in services for young children.
